

NUVACOR CUSTOM GRAPHICS HOW THEY WORK

The process is pretty straight forward and can be quite rapid (a week after we receive to scale files). The most important thing is to get a to scale file of either the Photographic image or Graphic image. This does not need to be 'Full' scale (i.e. 84" x 84" [7ft x 7ft]), but rather a High Definition – at least 300 dpi file 1/5 scale.

So, for my example of an 84" x 84" image the file could be 16.8" x 16.8" at least 300 dpi or better. File format can be pdf, ai, tiff or jpeg. The better the quality going in, the better the quality is going to be at output.

Sheet size availability is the same as our standard product offering:

Non Hard Coated Sheets: 51" x 100 or 51" x 120"
Hard Coated (Horizontal Use): 51" x 100"

Continuing with my size example of 84" x 84" – we could achieve that size by doing two sheets 42" x 84" h with a Vertical Seam in the center or two sheets 84" x 42" h with a Horizontal Seam in the center. Needless to say, if a Seam is required because of size, the seam can be wherever you want it to be. The size restriction for a single sheet is dictated by our 51" x 100" + base sheet dimension.

Depending on the size of the image/graphic required, we can manufacture sheets with multiple images on a single sheet, thus defraying the cost of the sheet across multiple images.

The base price for a 51" x 100" sheet with one or multiple images is \$800.00. This can be reduced of course if there is a certain volume (quantity) in the project and we would be able to quote a specific project once we have enough information to do so. Once we receive an image, we would produce a section to full scale (approx.. 20" x 51") free of charge which would be sent for approval prior to going into full scale production. Images can be Reflective with or without our Self Adhesive Backing or Translucent Back Lit.

We are currently working on a quantity of 96 Sheets involving 5 different Custom Graphics (supplied by the client) for a Healthcare Facility. There will be two panels per room (48 rooms) finished size of each Graphic approx.. 84" x 84", which we are supplying with a 1/2" oversize 'bleed' all around so that the panels can be scribed into place on site. As part of the contract we will be supplying those panels with a Finished, beveled, sanded and polished joining seam where the two panels per room are joined.

Hope this makes sense to you. If you have any additional questions, please feel free to ask.
